Final Project

The task: Build a small Python tool that solves a problem in your own life. Show it live in the last session.

How: Work with an AI assistant of your choice, in three steps.

1. **Find:** Brainstorm with the AI what annoys you or costs you time. Result: one sentence that says what your tool does.
2. **Plan:** Work out the concept with the AI: what goes in, what comes out, and what is the smallest version that already helps?
3. **Build:** Build that smallest version with the AI, try it, then improve it.

The presentation: 5 minutes per team.

1. The problem, on one slide
2. Live demo
3. One thing that worked well with AI, one that didn’t

Teams: up to three people, or solo.
